

The AutoCAD 2000 Tutor

Chapter 6

Adding Text to your Drawings

Time Estimate: 1 hour

Summary:

Creating text through both the Dynamic (DTEXT) and Multiline text (MTEXT) are presented. Multiline text dialog options and features are covered in depth. The creation of text styles and applying symbols fonts to your drawing will enhance the look of your drawing. Some additional Express Tools designed for text applications are also covered these are used in specialty situations.

Objectives:

Once the chapter has been completed, a student's abilities should include:

- Creating single line dynamic text
- Creating multi-line text (paragraph style)
- Changing text style (fonts, height)
- Using text justification options
- Using special text characters
- Editing existing text in a drawing
- Finding and replacing text in a drawing

Hints:

Create a foundation footer drawing using the Multiline command and modification tools. A foundation is an easy but realistic multi-line application to demonstrate. See the example

Multi-Line Example
